LED for Command Center

Beside full featured videowall functionality, IP-based videowall controller offers more features by implementing H.264/H.265 video streaming to create a virtual video matrix. Optional feature such KVM feature allows control center to manage and control other servers or PC from a central place in one monitor. It fully depends on IP infrastructure, therefore a very good network switch over 100Gbps bandwidth transfer capacity is required for smooth switching.

ARVIA LED Display can help enhance and elevate your interiors with ultra high definition LED displays. Our flexible display solutions can be tailored for any indoor applications.
